

KIT PACKAGING SOLUTIONS

APPLICATIONS

From simple single item kits, such as fixed quantity fastener boxes, to multiple item kits sealed in plastic welded pockets, BudPak has a kit packaging solution for your application.

The solution can be as simple as a single, digital counting scale to a complex kit packaging line complete with carton forming, carton closing and palletising.

THE HEART OF THE SYSTEM

A counting scale is the heart of a kit packaging solution. Whether it be a standalone, high-precision, digital counting scale for manually packing, or a fully automatic counting scale that is part of a fully automated packaging line, Accuweigh can provide the equipment required.

THE COMPLETE SYSTEM

While the counting scale is at the heart of the kit packaging process, kit packaging starts from part picking and counting and ends with kit packaging and palletising. BudPak can supply the complete automated system from start to finish. Different system configurations allow for different site footprints to suit your site and throughput.
